PROFESSIONAL SUMMARY

Software Engineer with 1 year of professional experience at Tata Consultancy Services (TCS) contributing to a real-time stock brokerage system. Hands-on experience in Java, Object-Oriented Programming, Data Structures, SQL, and FIX 4.4 protocol-based order routing and trade execution. Experience in Agile environments with cross-functional teams, supporting production-grade applications. Actively seeking opportunities in Software Development roles.

PROFESSIONAL EXPERIENCE

Software Engineer – Tata Consultancy Services (TCS)

Jan 2025 - Present

- Worked on a **real-time stock brokerage system**, supporting trade communication and order execution workflows.
- Implemented and validated **ONIX FIX 4.4 messages** including order placement, execution reports, and acknowledgments.
- Analysed application logs to **identify, debug, and resolve issues** in test and production environments.
- Assisted in **functional and integration testing** to ensure message accuracy and system stability.
- Collaborated with business analysts, QA teams, and senior developers in an Agile setup.
- Followed coding standards, documentation practices, and version control workflows.

Software Development Intern – Zemoso Technologies

Jul 2024 - Sep 2024

- Developed and enhanced **responsive web pages** using HTML, CSS, and JavaScript.
- Refactored UI code to improve performance, readability, and maintainability.
- Gained hands-on experience with Git by implementing workflows, managing branches, and resolving merge conflicts to support effective team collaboration.

TECHNICAL SKILLS

Languages: JAVA, SQL, HTML, CSS, JAVASCRIPT, C

Frameworks/Libraries: Spring Boot, Spring Data JPA, Hibernate, Spring Security, React.

Web/APIs: REST API design, JSON, JWT-based authentication

Core Concepts: Data Structures & Algorithms, OOP, DBMS, OS

Protocols: FIX 4.4, Socket Programming

Tools: Git, Visual Studio Code, PuTTY

PROJECTS

Expense Manager — Personal Expense Manage

- Build Expense Manager – a web app where users can add, edit and delete expenses , upload receipts set budgets and view spending charts.
- Implemented secure login and backend checks so each users data is private , added category transaction CRUD , input validation and receipt upload support.
- Designed a dashboard that shows monthly totals and category breakdowns, and added a CSV export to download transactions.

Restaurant Management Web App

- Restaurant management web app with drag-and-drop table ordering and order modals.
- Responsive, user-friendly UI designed with custom CSS for seamless cross-device use.
- Implemented event-driven functionality using JavaScript, focusing on maintainable and scalable code.

LLM-Based Report Generation System

- An LLM powered solution for transforming raw data into a pdf form.
- Technologies such as python, report lab, open-source API for training LLM, are used for the implementation.
- This Implementation allows the user to customise the reports eliminating the need for manual data processing and formatting.

Heart Stroke Prediction System

- Implemented a Heart Attack Risk Prediction System utilising the Random Forest algorithm.
- The project aims to evaluate an individual's vulnerability to heart attacks, significantly improving accuracy and efficiency in forecasting the likelihood of a person developing heart-related risks.

EDUCATION

B. Tech in Computer Science Engineering

May 2024

Sreenidhi Institute of Science And Technology – CGPA: 8.5
